Thin Solid Films 264 (1995) 301–305

thin Solid films

Subject Index of Volume 264

Adhesion
hardness measurements of thin films–determining the critical ratio of depth to thickness using FEM 59
Adsorption
influence of adsorbed gases on the surface energy of graphite: consequences on the friction behaviour 46
organic film formation investigated by atomic force microscopy on the nanometre scale 194
structure and dynamics of two-dimensional adlayers of a 2-pyridone smectogen studied by STM 246
AFM liquid cell
force microscopical investigation of human teeth in liquids 176
Aggregation
kinetic processes in metal epitaxy studied with variable temperature STM: Ag/Pt(111) 230
Aluminium
application of atomic force microscopy for microindentation testing 153
organic film formation investigated by atomic force microscopy on the nanometre scale 194
Amorphous materials
hydrogenated amorphous silicon films prepared at low substrate temperature on a cathode of an asymmetric r.f. plasma CVD system 11
Atomic force microscopy
AFM and TEM investigations of polypropylene/polyurethane blends 148
AFM for the imaging of large and steep submicroscopic features, artifacts and scraping with asymmetric cantilever tips 205
application of atomic force microscopy for microindentation testing 153
application of the needle sensor for microstructure measurements and atomic force microscopy 169
characterization of a cantilever with an integrated deflection sensor 159
lattice-resolution AFM on the layered dichalcogenide WSe_2 in the sliding regime 212
multivariate estimation of the systematic error of scanning probe microscopes 282
organic film formation investigated by atomic force microscopy on the nanometre scale 194
orientation of poly(γ-benzyl L-glutamate)/poly(ethylene oxide)/poly(γ-benzyl L-glutamate) triblock copolymer Langmuir–Blodgett films 82
the atomic force microscope as a near-field probe for ultrasound 165
Atomic resolution
lattice-resolution AFM on the layered dichalcogenide WSe_2 in the sliding regime 212
Cadmium telluride
UV laser-induced transformation of thin evaporated CdTe films in air 104
Cantilever
characterization of a cantilever with an integrated deflection sensor 159
Chemisorption
AFM for the imaging of large and steep submicroscopic features, artifacts and scraping with asymmetric cantilever tips 205
Coatings
hardness measurements of thin films–determining the critical ratio of depth to thickness using FEM 59
organic film formation investigated by atomic force microscopy on the nanometre scale 194
Cobalt
preparation and characterization of thin Co_3O_4 and $MnCo_2O_4$ films prepared on glass/SnO_2:F by spray pyrolysis at 150 °C for the oxygen electrode 18
Computer simulation
application of neural networks to a scanning probe microscopy system 291
Contrast formation in MFM
the influence of experimental parameters on contrast formation in magnetic force microscopy 141
Corrosion
force microscopical investigation of human teeth in liquids 176
Crystallization
improvement of the crystallinity of AlAs/GaAs superlattices grown on Si substrates by rapid thermal annealing 1
microstructural evolution and epitaxial alignment of thin films of lithium niobate deposited onto sapphire by metallo-organic decomposition 4

Deflection sensor
characterization of a cantilever with an integrated deflection sensor 159
Deposition process
fabrication of ultrafine SnO_2 thin films by the hydrothermal method 25
microstructural evolution and epitaxial alignment of thin films of lithium niobate deposited onto sapphire by metallo-organic decomposition 4
Dichalcogenide tungsten diselenide
lattice-resolution AFM on the layered dichalcogenide WSe_2 in the sliding regime 212
Diffusion
nanostructures in industrial materials 135

Elsevier Science S.A.

Elastic properties
the atomic force microscope as a near-field probe for ultrasound 165
Electrical properties and measurements
characterization of YSZ films by means of C–V measurements and TEM observations 109
thin-oxide MOS damage caused by wafer charging in magnetized helium plasma 72
Electrochemistry
adsorption of self-assembled monolayers of mercaptan on gold 240
Electron beam
patterning of an electron beam resist with a scanning tunnelling microscope operating in air 259
Electron diffraction
electron diffraction study on monolayer LB films of liquid-crystalline polyacrylate containing para-nitro azobenzene 89
Enamel structure
force microscopical investigation of human teeth in liquids 176
Epitaxy
kinetic processes in metal epitaxy studied with variable temperature STM: Ag/Pt(111) 230
microstructural evolution and epitaxial alignment of thin films of lithium niobate deposited onto sapphire by metallo-organic decomposition 4
Exposure
patterning of an electron beam resist with a scanning tunnelling microscope operating in air 259

Factor analysis
multivariate estimation of the systematic error of scanning probe microscopes 282
Film formation
organic film formation investigated by atomic force microscopy on the nanometre scale 194
Fourier transform infrared spectroscopy
hydrogenated amorphous silicon films prepared at low substrate temperature on a cathode of an asymmetric r.f. plasma CVD system 11
Friction
influence of adsorbed gases on the surface energy of graphite: consequences on the friction behaviour 46

Gallium arsenide
Improvement of the crystallinity of AlAs/GaAs superlattices grown on Si substrates by rapid thermal annealing 1
Glass
application of atomic force microscopy for microindentation testing 153
Glow discharge
hydrogenated amorphous silicon films prepared at low substrate temperature on a cathode of an asymmetric r.f. plasma CVD system 11
Gold
adsorption of self-assembled monolayers of mercaptan on gold 240
modification of thin gold films with a scanning force microscope 268
Graphite
influence of adsorbed gases on the surface energy of graphite: consequences on the friction behaviour 46

Hardness
application of atomic force microscopy for microindentation testing 153
Human teeth
force microscopical investigation of human teeth in liquids 176

Image processing
force microscopical investigation of human teeth in liquids 176
Imaging mesoscopic structures
near-field optics: light for the world of nano-scale science 250
Ion beam
optical near-field characterization of submicron structured silicon films 255

Kinetics
kinetic processes in metal epitaxy studied with variable temperature STM: Ag/Pt(111) 230

Langmuir–Blodgett films
electron diffraction study on monolayer LB films of liquid-crystalline polyacrylate containing para-nitro azobenzene 89
orientation of poly(γ-benzyl L-glutamate)/poly(ethylene oxide)/poly(γ-benzyl L-glutamate) triblock copolymer Langmuir–Blodgett films 82
Laser irradiation
UV laser-induced transformation of thin evaporated CdTe films in air 104
Lattice parameters
EXAFS of sputter-deposited MoS_2 films 120
Lithography
optical near-field characterization of submicron structured silicon films 255
patterning of an electron beam resist with a scanning tunnelling microscope operating in air 259
scanning near-field optical lithography 264
Local density of states
thermovoltages in vacuum tunneling investigated by scanning tunneling microscopy 223
Low energy electron diffraction
strain relaxation in ultrathin epitaxial films of β-$FeSi_2$ on unstrained and strained Si(100) surfaces 28

Magnetic force microscopy
the influence of experimental parameters on contrast formation in magnetic force microscopy 141
Magnetic thin film discs
the influence of experimental parameters on contrast formation in magnetic force microscopy 141
Manganese
preparation and characterization of thin Co_3O_4 and $MnCo_2O_4$ films prepared on glass/SnO_2:F by spray pyrolysis at 150 °C for the oxygen electrode 18
Membranes
membrane characterization by means of pneumatic scanning force microscopy 184
Metal–oxide semiconductor structure
thin-oxide MOS damage caused by wafer charging in magnetized helium plasma 72

Mica
the atomic force microscope as a near-field probe for ultrasound 165
Microscopy
scanning near-field optical lithography 264
Microstructures
application of the needle sensor for microstructure measurements and atomic force microscopy 169
Monoatomic steps
thermovoltages in vacuum tunneling investigated by scanning tunneling microscopy 223
Monolayers
long-range tilt orientational order in phospholipid monolayers: the inner structure of dimyristoyl-phosphatidyl-ethanolamine domains 94

Nanostructures
AFM for the imaging of large and steep submicroscopic features, artifacts and scraping with asymmetric cantilever tips 205
fabrication of ultrafine SnO_2 thin films by the hydrothermal method 25
scanning near-field optical lithography 264
Nanotechnology
calculation of STM profiles for nanometrology 273
near-field optics: light for the world of nano-scale science 250
Near field
near-field optics: light for the world of nano-scale science 250
optical near-field characterization of submicron structured silicon films 255
scanning near-field optical lithography 264
Normalized differential conductivity
normalized differential conductivity and surface density of states in simulated tunneling spectroscopy 277
Nucleation
kinetic processes in metal epitaxy studied with variable temperature STM: Ag/Pt(111) 230

Optical properties
Improvement of the crystallinity of AlAs/GaAs superlattices grown on Si substrates by rapid thermal annealing 1
optical near-field characterization of submicron structured silicon films 255
Organic substances
AFM for the imaging of large and steep submicroscopic features, artifacts and scraping with asymmetric cantilever tips 205
long-range tilt orientational order in phospholipid monolayers: the inner structure of dimyristoyl-phosphatidyl-ethanolamine domains 94
Oxides
characterization of YSZ films by means of *C–V* measurements and TEM observations 109
Oxygen
preparation and characterization of thin Co_3O_4 and $MnCo_2O_4$ films prepared on glass/SnO_2:F by spray pyrolysis at 150 °C for the oxygen electrode 18

Phase transitions
scanning tunnelling microscopy on quenched Si(111) surfaces 236
Photoconductivity
hydrogenated amorphous silicon films prepared at low substrate temperature on a cathode of an asymmetric r.f. plasma CVD system 11
Physical vapour deposition
EXAFS of sputter-deposited MoS_2 films 120
Piezoresistive detection system
characterization of a cantilever with an integrated deflection sensor 159
Plasma processing and deposition
plasma-assisted deposition of tungsten-containing siloxane thin films 40
thin-oxide MOS damage caused by wafer charging in magnetized helium plasma 72
Polymers
AFM and TEM investigations of polypropylene/polyurethane blends 148
electron diffraction study on monolayer LB films of liquid-crystalline polyacrylate containing para-nitro azobenzene 89
nanostructures in industrial materials 135
organic film formation investigated by atomic force microscopy on the nanometre scale 194
Probes
application of the needle sensor for microstructure measurements and atomic force microscopy 169
Pyrolysis
preparation and characterization of thin Co_3O_4 and $MnCo_2O_4$ films prepared on glass/SnO_2:F by spray pyrolysis at 150 °C for the oxygen electrode 18

Quartz resonator
1 MHz quartz length extension resonator as a probe for scanning near-field acoustic microscopy 172

Reflection spectroscopy
attenuated total reflection spectroscopy of Ag–SiO_2 composite films 115
Rutherford backscattering spectroscopy
microstructural evolution and epitaxial alignment of thin films of lithium niobate deposited onto sapphire by metallo-organic decomposition 4

Scanning force microscopy
force microscopical investigation of human teeth in liquids 176
membrane characterization by means of pneumatic scanning force microscopy 184
modification of thin gold films with a scanning force microscope 268
Scanning near-field acoustic microscopy
1 MHz quartz length extension resonator as a probe for scanning near-field acoustic microscopy 172
Scanning near-field optical microscopy
near-field optics: light for the world of nano-scale science 250
Scanning tunneling microscopy
adsorption of self-assembled monolayers of mercaptan on gold 240
an ultra-high resolution control unit for a scanning tunnelling microscope 217
application of neural networks to a scanning probe microscopy system 291
calculation of STM profiles for nanometrology 273

patterning of an electron beam resist with a scanning tunnelling microscope operating in air 259
probing of oscillating surfaces by a scanning acoustic tunneling microscope 226
scanning tunnelling microscopy on quenched Si(111) surfaces 236
structure and dynamics of two-dimensional adlayers of a 2-pyridone smectogen studied by STM 246
thermovoltages in vacuum tunneling investigated by scanning tunneling microscopy 223
UV laser-induced transformation of thin evaporated CdTe films in air 104
Self-assembled films
adsorption of self-assembled monolayers of mercaptan on gold 240
Sensitivity
characterization of a cantilever with an integrated deflection sensor 159
Sensors
application of neural networks to a scanning probe microscopy system 291
application of the needle sensor for microstructure measurements and atomic force microscopy 169
the atomic force microscope as a near-field probe for ultrasound 165
Silicides
strain relaxation in ultrathin epitaxial films of β-$FeSi_2$ on unstrained and strained Si(100) surfaces 28
Silicon
optical near-field characterization of submicron structured silicon films 255
scanning tunnelling microscopy on quenched Si(111) surfaces 236
Silicon oxide
thin-oxide MOS damage caused by wafer charging in magnetized helium plasma 72
Silicon wafer
organic film formation investigated by atomic force microscopy on the nanometre scale 194
Solid phase epitaxy
strain relaxation in ultrathin epitaxial films of β-$FeSi_2$ on unstrained and strained Si(100) surfaces 28
Sputtering
characterization of YSZ films by means of C–V measurements and TEM observations 109
Stick–slip motion
lattice-resolution AFM on the layered dichalcogenide WSe_2 in the sliding regime 212
Structural properties
structure and dynamics of two-dimensional adlayers of a 2-pyridone smectogen studied by STM 246
Superlattices
Improvement of the crystallinity of AlAs/GaAs superlattices grown on Si substrates by rapid thermal annealing 1
Surface acoustic waves
probing of oscillating surfaces by a scanning acoustic tunneling microscope 226
Surface composition
plasma-assisted deposition of tungsten-containing siloxane thin films 40
Surface density of states
normalized differential conductivity and surface density of states in simulated tunneling spectroscopy 277
Surface modification
modification of thin gold films with a scanning force microscope 268
Surface morphology
membrane characterization by means of pneumatic scanning force microscopy 184
nanostructures in industrial materials 135
scanning tunnelling microscopy on quenched Si(111) surfaces 236
Surface plasmons
attenuated total reflection spectroscopy of Ag–SiO_2 composite films 115
Surface potential
influence of adsorbed gases on the surface energy of graphite: consequences on the friction behaviour 46
Surface pressure
long-range tilt orientational order in phospholipid monolayers: the inner structure of dimyristoyl-phosphatidyl-ethanolamine domains 94
Surface roughness
multivariate estimation of the systematic error of scanning probe microscopes 282
Surface stress
strain relaxation in ultrathin epitaxial films of β-$FeSi_2$ on unstrained and strained Si(100) surfaces 28
Surface structure
long-range tilt orientational order in phospholipid monolayers: the inner structure of dimyristoyl-phosphatidyl-ethanolamine domains 94
membrane characterization by means of pneumatic scanning force microscopy 184
nanostructures in industrial materials 135
Surface tension
fabrication of ultrafine SnO_2 thin films by the hydrothermal method 25
Surface topography
calculation of STM profiles for nanometrology 273

Theoretical model
calculation of STM profiles for nanometrology 273
Thermovoltage
thermovoltages in vacuum tunneling investigated by scanning tunneling microscopy 223
Thiols
adsorption of self-assembled monolayers of mercaptan on gold 240
Tin
tribological properties of TiN and TiC films in vacuum at high temperature 52
Tin oxide
fabrication of ultrafine SnO_2 thin films by the hydrothermal method 25
Transmission electron microscopy
AFM and TEM investigations of polypropylene/polyurethane blends 148
characterization of YSZ films by means of C–V measurements and TEM observations 109
electron diffraction study on monolayer LB films of liquid-crystalline polyacrylate containing para-nitro azobenzene 89
Tribology
EXAFS of sputter-deposited MoS_2 films 120
hardness measurements of thin films–determining the critical ratio of depth to thickness using FEM 59
tribological properties of TiN and TiC films in vacuum at high temperature 52
Tungsten
plasma-assisted deposition of tungsten-containing siloxane thin films 40

Tunneling
application of neural networks to a scanning probe microscopy system 291
normalized differential conductivity and surface density of states in simulated tunneling spectroscopy 277
UV laser-induced transformation of thin evaporated CdTe films in air 104

X-ray absorption
EXAFS of sputter-deposited MoS_2 films 120
X-ray photoelectron spectroscopy
plasma-assisted deposition of tungsten-containing siloxane thin films 40
